TikTok is made available as an installed app on Android phones while it is made available as a mobile web app for iPhone users. Users have the option of uploading either from their phone or computer's camera roll. Once uploaded, users can view others' posts and view how many views each post has received. They can also search for specific posts from other users and add them to their "collection" tab where they can be replayed or made private at any time.",

Due to TikTok's popularity on social media, other companies are following in its footsteps. Snapchat parent company Snap Inc., for example, recently rolled out its own musical.ly clone called "Stories. It was designed with an older audience – teens and young adults – in mind, and has features that differentiate it from TikTok, including the ability to add music to videos.",

TikTok allows you to upload videos with various effects including stickers, emoji's and text effects that are very easy to use and they can be used in your video after recording without changing the original video editing software.",

TFYP was mentioned in an article by PC World under the headline "30 Smart Apps to Improve your Brain". TikTok was launched in August 2017. The app is available in Android, iOS and Windows platforms. The platform's growth has been attributed to its ability to edit video, similar to Instagram stories on the platform. However, TikTok has generally received less coverage from media than other social media sites that have similar apps such as Facebook and Snapchat.",

In October 2018, TikTok announced that it would be removing all adult-themed content from the app. Furthermore, machine learning is now being used to detect and remove inappropriate content such as nudity or excessive violence.",
